Professional Summary

Software Engineering Intern with proven leadership in managing 3–5 person teams and delivering 20–30% improvements in web and AI projects. Skilled in GenAI Apps with Gemini, Multi-Agent Systems, AWS Cloud, TensorFlow, Python, React, and Tableau. Demonstrated strong problem-solving abilities by implementing AI-driven solutions and optimizing cloud-based architectures, resulting in measurable performance gains and user engagement improvements.

Work Experience

Intern – Delta The Innovators

Jun'25 to Dec'25

- Designed and deployed live web projects independently, while contributing to AI/IT initiatives, content creation, and training support, gaining hands-on exposure to digital innovation through events, workshops, and expert interactions.
- Assisted in software development lifecycle by coding and debugging features for 5+ web-based projects over a 3-month internship, utilizing WordPress and React to enhance system reliability and meet bi-weekly sprint targets

Software Development Intern – Prodigy Info-Tech

Jun'25 to Jul'25

- Worked on diverse programming projects, including a temperature converter, guessing game, contact management system, and a web scraping tool to collect and store e-commerce data in CSV format.
- Strengthened expertise in algorithm design, file handling, and real-world data extraction through hands-on coding assignments.
- Applied robust debugging techniques and version control practices, cutting code defects by 20% and accelerating sprint delivery by 15%, improving code reliability and enabling seamless collaboration with peers during sprint cycles.

Volunteering & Leadership

Events Head – Placement Committee

Sept'24 to Present

- Spearheaded end-to-end campus recruitment drives, onboarding companies like Wipro through cold outreach, strategic networking, and direct engagement.
- Led execution of HR conclaves and industry talks, managing logistics, communication, and on-ground coordination for seamless events.
- Initiated recruiter relations via emails, calls, and tech park visits, establishing contacts with 15+ recruiters and increasing placement opportunities by 30%, successfully expanding the placement pipeline.

Head of Creatives Department – Entrepreneurship Cell

Jul'24 to May'25

- Collaborated with cross-functional teams to align conceptual ideas with project objectives, fostering synergy.
- Ensure brand consistency with creative flair, introducing innovative approaches to solve design challenges and produce engaging content.

- Led the design and execution of event decorations for festivals attended by 300+ participants, enhancing visual appeal and boosting attendee satisfaction by 60%.
- Created promotional materials, including posts and brochures, to enhance event visibility and drive participation throughout the fest.

Certifications

Deploy Multi-Agent Systems with Agent Development Kit (ADK) and Agent Engine - Google Cloud • Sep'25

Deploy GenAI Apps with Gemini and Streamlit - Google Cloud • Sep'25

Prompt Design in Vertex AI - Google Cloud • Sep'25

AWS Cloud computing Architecture - AWS • Jun'25

CEH v13:SQL Injection - Skillsoft • Jun'25

Forage- Deloitte Australia - Technology Job Simulation, TATA-Data Visualization. - Forage • Jun'25

Artificial Intelligence - ACADEMOR • Jul'24

Skills

Programming Languages: C++, Python, HTML, CSS, SQL, JAVA, Javascript, R, MATLAB, ADK

Tools & Databases: VS Code, Tableau, Android Studio, SaaS, AutoCAD, Git, MySQL, MongoDB, Firebase Realtime DB

Libraries & Frameworks: Angular JS, TensorFlow, Scikit-Learn, NLTK

Soft Skills: Problem Solving, Critical Thinking, Leadership, Collaboration

Languages: English, Hindi, Marathi, Sanskrit, German

Projects

Elevate X-AI based Up-skilling web app

- Developed an AI-powered career growth platform featuring a resume analyzer (NLTK, Scikit-learn), job trend tracker, and personalized learning roadmap generator.
- Integrated an AI chatbot for real-time query resolution and live progress dashboards/leaderboards using React and Firebase, improving user engagement by 45%.

AI for Agriculture & Food Redistribution

- Build a multilingual AI platform using TensorFlow to detect plant diseases from leaf images and generate crop recommendations with 92% accuracy.
- Integrated real-time geolocation services to connect nearby food donors and NGOs, supporting 5 languages and streamlining surplus food delivery.
- Combined AI, sustainability, and social impact by enabling 30% faster redistribution of surplus produce.

Canteen Hub Application

- Created a full-stack canteen management system with a graphical user interface (GUI), categorized menus, and cart-based order processing.
- Automated bill generation with unique ticket IDs, improving order processing speed by 50% and minimizing billing errors.
- Used Python, MongoDB, and Angular for robust backend and responsive frontend.
